Summary

Full Stack Engineer specializing in architecting and shipping production-ready systems end-to-end. I build high-performance React and Next.js applications and React Native mobile apps backed by scalable backend infrastructure and automated CI/CD workflows. I focus on pragmatic architecture, performance, and infrastructure ownership to help teams move fast without accumulating technical debt.

Experience

Full Stack Engineer, 01/2024 - Current
zennit

- Developed high-performance React and Next.js web applications and React Native mobile apps, delivering seamless integration with real-time backend services.
- Designed and automated CI/CD pipelines and containerized deployments using Docker, Traefik, and GitHub/GitLab CI.
- Architected backend infrastructure from scratch, defining system structure, deployment workflows, and scalability strategy.
- Led backend system design and implementation for production SaaS platforms, ensuring reliability and performance for real users in high-availability environments.
- Designed and implemented a custom authentication and identity system supporting multi-provider OAuth, MFA, security keys, and single-use password flows.
- Built multi-organization user model with profile-based relationships and custom ABAC permission management, enhancing access control and user experience.
- Implemented device-level remote session management and secure session invalidation.

Backend Developer, 08/2025 - 02/2026
Hire A Loo

- Implemented backend APIs and integrated full-text search using Laravel Scout with Typesense.
- Ensured synchronization between database models and search indexing workflows, optimizing data retrieval and search accuracy.
- Refactored data models and business logic, ensuring alignment with updated system structure for improved performance.
- Facilitated migration of legacy backend system to redesigned architecture, enhancing system reliability and maintainability.

Full Stack Developer, 01/2023 - 01/2024
Clickservice GmbH

- Built Django backend services with optimized PostgreSQL queries to support scalable application performance.
- Improved performance through direct SQL query tuning beyond ORM abstractions.
- Integrated third-party APIs and automated reporting workflows to streamline data processing.
- Developed production-ready frontends using React and TypeScript to enhance user experience.

Mobile Developer, 01/2022 - 12/2022
Vodafone Albania

- Developed and maintained React Native applications for iOS and Android, enhancing user experience across platforms.
- Integrated REST APIs and WebSocket connections to enable real-time features, improving application responsiveness.
- Implemented secure authentication mechanisms and automated deployment workflows, streamlining release processes.

Junior Frontend Developer, 01/2021 - 12/2021
EnRedYAte

- Built responsive user interfaces using CSS and SCSS, improving accessibility across devices.
- Collaborated with designers to create user-friendly interfaces and experiences.
- Developed and maintained WordPress platforms with custom React components to enhance user experience.
- Implemented code reviews to ensure quality and maintainability of projects.

Skills

- Laravel and Django
- React and Next.js
- TypeScript and React Native
- PostgreSQL and Redis
- Typesense and Docker
- GitHub Actions and GitLab CI
- Traefik and Nginx
- REST APIs and OAuth
- MFA and ABAC
- Microservices architecture
- RESTful API integration
- Problem analysis
- Agile methodologies
- Database management
- Full stack development

Education

Bachelor of Science: Informatic Engineering, 2026
European University of Tirana - Albania

ICT Vocational Degree, 2023
Hermann Gmeiner High School - Albania

Core Stack

Laravel, Django, Convex, React, Next.js, TypeScript, React Native, PostgreSQL, Redis, Typesense, Docker, Traefik, GitHub Actions, GitLab CI, Nginx, REST APIs, OAuth, MFA, ABAC

Languages

Albanian: Native
Native
